

# Caellum Kennedy

Graduate Software Engineer

Galway, Ireland | [caellumkennedy@gmail.com](mailto:caellumkennedy@gmail.com) | 0872619210

## PROFILE

Final-year Computer Science and Information Technology student at the University of Galway, with a projected first-class result and a completed placement building and improving software in a regulated medical device environment, where one project earned an internal Value Improvement Programme award for saving 20,000 dollars each year. Comfortable across the full development lifecycle and able to work in unfamiliar codebases and across teams. Seeking a graduate software engineering role with scope to build and maintain real systems.

## TECHNICAL SKILLS

**Programming Languages:** Java, Python, C#, C

**Web and Full-Stack:** JavaScript, React, Vue.js, Spring Boot, HTML/CSS

**Low-Code and Cloud:** Microsoft Power Platform (Power Apps, Power BI, Power Automate), SharePoint

**Databases:** MySQL / MariaDB, Firebase, SharePoint Lists

**Practices and Tools:** Git and GitHub, test-driven development, CI/CD with GitHub Actions, Agile / Scrum, MATLAB

## CERTIFICATIONS

**Microsoft Certified: Power Platform Fundamentals (PL-900)**

Jun 2026

## WORK EXPERIENCE

**Software Engineer (Placement)**

Jan 2025 – Sep 2025

*Boston Scientific, Galway*

- Designed and built a Power Apps meeting management system that earned an internal Value Improvement Programme award for saving 20,000 dollars per year; optimised its database loading to cut load times from minutes to milliseconds.
- Built real-time reporting dashboards in Power BI and automated recurring workflows with Power Automate, gaining a full year of hands-on Power Platform experience.
- Maintained and extended the department's C# model-view-controller web application managing software validation records, refactoring code and documenting previously undocumented systems.
- Coordinated update schedules and downtime with leads across multiple teams, deploying changes into an active production environment.

## PROJECTS

**Final Year Project: Self-Play Stabilisation for Reinforcement-Learning Agents** 2025 – 2026

*Supervised by Dr. Patrick Mannion, University of Galway*

- Trained PPO reinforcement-learning agents in the MicroRTS strategy environment to test historical self-play as a training-stabilisation mechanism, benchmarking strength with TrueSkill.
- Found that historical self-play conferred a measurable TrueSkill advantage at 80M training steps but was indistinguishable from the baseline at 30M, isolating the effect of training budget on the result.

**Spotify Statistics Tracker**

2023 – 2024

*Spring Boot, React, Firebase*

- Built a full-stack web application integrating the Spotify and Last.fm APIs to aggregate and visualise listening data, with Firebase handling authentication and storage.

## EDUCATION

**University of Galway**

2023 – 2026

*BSc (Hons) Computer Science and Information Technology | Projected: First-Class Honours (1:1)*

- Relevant coursework: Software Engineering, Artificial Intelligence, Distributed and Parallel Systems, Computer Networks, Real-Time Systems, Databases, and Machine Learning.

**Maynooth University**

2018 – 2022

*Physics with Astrophysics; transferred to Computer Science at University of Galway in 2023*

**CBS Roscommon** Leaving Certificate, 456 points

2018
